Introduction

Studying fuel and fire through the integration of ecology, economy, technology and culture

ROBYN VEAL

Research approaches
Organization of the book
Discussion
Further thoughts and questions
Conclusions

Part I Science and technology of fuel

Chapter 1 The history and science of fire and fuel in the Roman Empire

ROBYN VEAL

Characterizing the importance of fuel in the economy
Calorific potential and efficiency of fuel consumption
Factors affecting the wood supply
Roman fuel consuming activities: wood or charcoal?
Pricing and transport
Modelling the size of the wood fuel supply
History of wood charcoal analysis
The reflectance technique: differentiating raw wood and charcoal fuel
Conclusion

Chapter 2 Glass and fuel

H.E.M. COOL

The development of the glass industries
Glass chemistry, manufacture and melting temperatures
Putting the numbers together

Chapter 3 Problems in estimating fuels consumed in buildings: fuel requirements of hypocausted baths

TONY ROOK

Simplified calculation of heat loss from buildings
Openings
Heat requirements of a simplified caldarium
Inside temperature
The structure of a hypocausted building
The fuel consumption of a hypocaust
Conclusions

Chapter 4 Throwing money out the window: fuel in the Forum Baths at Ostia

ISMINI MILIARESIS

The windows of the Forum Baths at Ostia
The effects of window glazing
Heat study method and initial results
Conclusion
Part II  Fuel in ceramics making: ancient and modern examples

Chapter 5  Fuelling Roman pottery kilns in Britain and North Africa: climatic, economic and traditional strategies  
Victoria Leitch  
Kilns 53  
Choice, location and collection of North African fuel 57  
Economic factors 58  
Conclusions 59

Chapter 6  Kilns in a wood-poor environment: traditional workshops in the western delta of Egypt  
Archer Martin 63

Chapter 7  Necessity is the mother of invention: the fuel of Graeco-Roman pottery kilns in the semi-arid Eastern Marmarica  
Heike Möller & Anna-Katharina Rieger  
The fuel consumers: pottery production and kilns in the Eastern Marmarica 71  
How to generate biomass 76  
Botanical remains from Wadi Qasaba 80  
Botanical remains from Wadi Umm el-Ashdan 82  
Modern pottery workshops – an ethnoarchaeological approach to fuelling kilns 84  
Conclusion 84

Chapter 8  Continuity of production: kilns and fuel in Egypt and the Mediterranean  
Mohamed Kenawi & Cristina Mondin  
Hellenistic and Roman kilns: the evidence 87  
Medieval to Early Modern kilns: the evidence 88  
Modern Egyptian kilns in Fayoum 89  
Modern kilns in the Mediterranean 92  
Discussion 95

Part III  Alternative fuels to wood: olive pressings and oil

Chapter 9  Commercialization of the night at Pompeii  
David G. Griffiths  
Pompeii: a case study 99  
Quantifying consumption 104  
Conclusions 106

Chapter 10  The utility of olive oil pressing waste as a fuel source in the Roman world  
Erica Rowan  
The properties of pomace 110  
Quantities generated in the Roman Empire 111  
Consequences of quantity 111  
The case of Lepcis Magna 113  
Rome’s challenge and solution 114  
Conclusions 116

Chapter 11  Of olives and wood: baking bread in Pompeii  
Sylvie Coubray, Nicolas Monteix & Véronique Zech-Matterne  
Sampling macro-remains 121  
Results of the plant remains study 123  
Interpretation of plant assemblages 124  
Charcoal assemblage 125  
Olive pressing by-products used as fuel 125  
Conclusion 131

Epilogue  Final discussions  
Robyn Veal & Jim Ball  
Introduction (Robyn Veal) 135  
Wood fuels in the present-day context, or ‘What can the past learn from the present?’ (Jim Ball) 135
